

AGILE SWD BRIEFING

BUSINESS OBJECTIVE

Agile software development contains some of the best practices in terms of software quality. The Agile approach aims for flexible software, fast delivery, high quality and close customer involvement.

Although the agile approach has had many successes, it remains relatively unknown.

Maybe it can solve some of your problems...

TOPICS

Software engineering
Process Improvement
Business agility
Flexible software

CONTENT

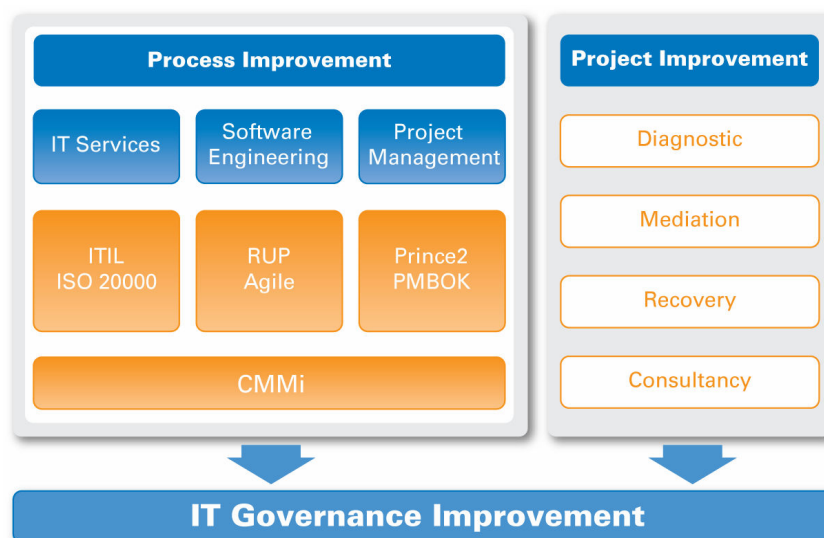

About 20 % of software development projects in USA and UK currently use Agile Software Development practices. The reason for this: they deliver software of higher quality faster and closer to the customer's need. Moreover, developers enjoy the work more.

In our briefing, we will explain XP (eXtreme Programming) and Scrum. XP is a set of state of the art programming practices, such as test driven development, pair programming, continuous integration, and close customer involvement. Scrum is a project management methodology, quite different from more hierarchically structured approaches yet very successful in creating a high performance team, with frequent delivery of working software as a key performance characteristic.

The briefing concentrates on the advantages agile software development will bring your company and has a management perspective. If you are interested in a higher quality and productivity of your development teams, or a closer alignment to business needs, this briefing should interest you.

DURATION

2 to 3 hours

BENEFITS

- Better software quality
- Fewer projects' failure
- Better alignment to business
- High performance teams
- More job satisfaction
