

PROJECT RECOVERY

BUSINESS OBJECTIVE

An uncomfortably large proportion of projects goes off the rails and gets in a vicious negative spiral with a loss of staff morale and large financial losses.

ADJUGO provides advice and helps in recovering the project. We assess the current situation of the project, we investigate alternatives, we revitalize the team and we improve project management processes.

TOPICS

Software engineering
Prince 2 and PMBok
Agile and RUP

RELATED SERVICES

Project Management

Project Coaching

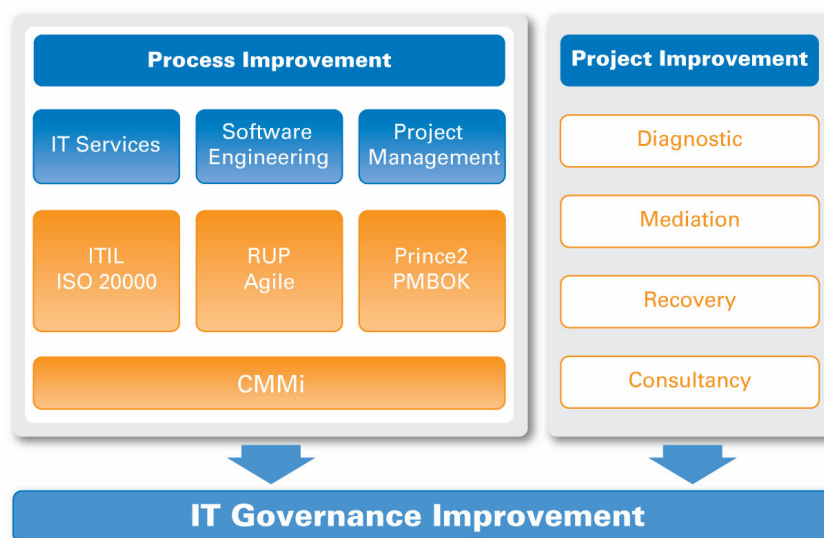

CONTENT

You can call us in whenever you have concerns about a current software development project. We will first perform a project assessment that will allow us to find the areas of concern. After the assessment we will present a project recovery plan (PRP). This PRP gives a general outline of the approach for recovery, and describes milestones and the necessary reporting.

Project recovery quite often calls for realigning general management and project management. In some cases the project has caused so much damage that project recovery requires some crisis management; more frequently, a gradual improvement and careful change management will be enough to restore confidence.

Project recovery activities and their success will depend very much on the specific circumstances, how deep the problems are rooted, how much time has passed, previous failed attempts to restore the project, etc. In fact, project recovery call for maturity and experience, with consultants – project recovery managers that inspire confidence and restore human relations.

Of course, a recovery project will require a hands-on approach. The time our consultants will spend on the project will depend on the situation. The PRP will detail our involvement and the expected milestones.

BENEFITS

- Project on tracks
- Staff morale
- 'Lessons learned'
- Stop financial losses
